

Sample Policy Document

User Access, Roles, Warranty and Returns Policies

Disclaimer

This is a sample document prepared for reference and review purposes only. The content should be validated and approved by the appropriate business, legal, compliance, and operational stakeholders before being used as an official policy document.

Policy Area	Purpose / Coverage
Audit and Compliance	The Parts Ordering User role is the standard role for workshop staff and parts counter personnel who are responsible for ordering spare parts. Users with this role can search the parts catalog, view pricing and availability, place orders, track orders, view delivery status, and view their account's billing documents. They can also submit claims and monitor claim status. Parts Ordering Users cannot access administrative functions, cannot modify account settings, and cannot view or manage other users' accounts.
Policy Updates	The warranty covers defects in materials and workmanship that cause a part to fail under normal operating conditions within the warranty period. A part is considered to have failed under warranty if it stops functioning as intended due to an inherent defect that was present at the time of manufacture, and not due to external factors such as incorrect installation, misuse, accident, or normal wear and tear. The warranty applies to parts that have been installed on the correct vehicle type and model as specified in the compatibility information in the parts catalog. Parts installed on vehicles for which they are not specified as compatible are not covered by warranty.

1. Audit and Compliance

1.1 Parts Ordering User

1.1.1 Overview

The Parts Ordering User role is the standard role for workshop staff and parts counter personnel who are responsible for ordering spare parts. Users with this role can search the parts catalog, view pricing and availability, place orders, track orders, view delivery status, and view their account's billing documents. They can also submit claims and monitor claim status. Parts Ordering Users cannot access administrative functions, cannot modify account settings, and cannot view or manage other users' accounts.

1.2 Parts Ordering Supervisor

1.2.1 Overview

The Parts Ordering Supervisor role is intended for team leaders and senior parts personnel who need additional visibility and control over the ordering activity of their team. In addition to all the permissions of the Parts Ordering User role, supervisors can view all orders placed by users within their workshop or dealership, can approve or reject orders above a defined value threshold if order approval workflows are enabled, and can access reporting features that show ordering activity and spend summaries for their location.

1.3 Claims Administrator

1.3.1 Overview

The Claims Administrator role is for personnel who are specifically responsible for managing the claims process. In addition to the standard claims submission and tracking permissions, Claims Administrators can view all claims submitted by their organisation, can manage the quarterly and yearly return submissions on behalf of their organisation, and have access to detailed claims reporting. This role is typically assigned to a dedicated claims coordinator within a dealership.

1.4 Workshop Administrator

1.4.1 Overview

The Workshop Administrator role is for the person responsible for managing the portal setup for a specific workshop or service location. Workshop Administrators can manage the workshop's profile information including address and contact details, can manage the list of users associated with the workshop, can assign and modify user roles for users within their workshop, and can configure workshop-specific settings such as default delivery addresses. Workshop Administrators cannot manage users or settings for other workshops within the same dealership group.

1.5 Dealer Administrator

1.5.1 Overview

The Dealer Administrator role is the highest level of access within a dealership organisation. Dealer Administrators have all the permissions of the Workshop Administrator role and can additionally manage multiple workshops within their organisation, view consolidated reporting across all workshops, manage the organisation's account settings, and request changes to commercial terms such as credit limits through the portal. There should be a limited number of Dealer Administrators within each organisation to maintain appropriate control over account management.

1.6 Read-Only User

1.6.1 Overview

The Read-Only User role is for personnel who need visibility into ordering and delivery activity but do not need to place orders or submit claims. Users with this role can view orders, deliveries, claims, and billing documents but cannot create, modify, or submit anything. This role is suitable for finance staff who need to view invoices, or management personnel who need visibility into parts ordering activity without needing to perform transactions.

1.7 New User Access

1.7.1 Overview

Access to the portal is requested through the organisation's Dealer Administrator or Workshop Administrator. The administrator creates a new user account in the portal's user management section, assigns the appropriate role, and sets up the user's login credentials. The new user receives an email with their login details and instructions for setting their password. New users should complete the initial login and password setup within the timeframe specified in the welcome email, after which the setup link expires.

1.8 Changing User Roles

1.8.1 Overview

If a user's responsibilities change and they require a different level of access, the Workshop Administrator or Dealer Administrator can modify the user's role through the user management section of the portal. Role changes take effect immediately. The administrator should review user roles periodically to ensure they remain appropriate for each user's current responsibilities.

1.9 Temporary Access

1.9.1 Overview

In some situations, a user may need temporary access to a higher level of permissions, for example to cover for a colleague who is absent. Temporary role changes can be made by the administrator and should be reverted as soon as the temporary need has passed. Administrators are responsible for monitoring and reverting temporary access changes.

1.10 When Access Should Be Revoked

1.10.1 Overview

Access to the portal should be revoked promptly when a user leaves the organisation, when a user moves to a role that no longer requires portal access, or when there is a security concern related to a specific user account. Administrators are responsible for ensuring that access is revoked in a timely manner. Failure to revoke access promptly when a user leaves the organisation is a security risk and may result in unauthorised use of the account.

1.11 How to Revoke Access

1.11.1 Overview

The Workshop Administrator or Dealer Administrator can deactivate a user account through the user management section of the portal. Deactivating an account prevents the user from logging in but retains the account's history and transaction records for audit purposes. Accounts should be deactivated rather than deleted to preserve the audit trail.

2. Policy Updates

2.1 What the Warranty Covers

2.1.1 Overview

The warranty covers defects in materials and workmanship that cause a part to fail under normal operating conditions within the warranty period. A part is considered to have failed under warranty if it stops functioning as intended due to an inherent defect that was present at the time of manufacture, and not due to external factors such as incorrect installation, misuse, accident, or normal wear and tear. The warranty applies to parts that have been installed on the correct vehicle type and model as specified in the compatibility information in the parts catalog. Parts installed on vehicles for which they are not specified as compatible are not covered by warranty.

2.2 Warranty Periods

2.2.1 Overview

Warranty periods vary by part category. Mechanical components such as engine parts, transmission components, and brake system parts are typically covered for a period of twelve months from the date of installation or twenty-four months from the date of purchase, whichever comes first. Electrical components are typically covered for twelve months from the date of installation or eighteen months from the date of purchase, whichever comes first. Consumable parts such as filters, belts, and fluids are not covered by warranty as they are expected to be replaced at regular service intervals. Body parts and trim components are covered for six months from the date of installation. The specific warranty period applicable to a part can be confirmed by checking the part category in the parts catalog or by contacting the technical support team.

2.3 What the Warranty Does Not Cover

2.3.1 Overview

The warranty does not cover damage caused by incorrect installation. Parts must be installed by a qualified technician following the manufacturer's installation instructions. The warranty does not cover damage caused by the use of incorrect fluids, lubricants, or other consumables. The warranty does not cover normal wear and tear, which is the gradual deterioration of a part through regular use over time. The warranty does not cover damage caused by accidents, collisions, or external impacts. The warranty does not cover parts that have been modified or altered from their original specification. The warranty does not cover parts that have been used in racing, competition, or other applications outside of normal road use.

2.4 Warranty Claim Requirements

2.4.1 Overview

To make a warranty claim, the following information must be provided. The original purchase order number or invoice number for the part being claimed. The part number and quantity being claimed. The date the part was installed. The date the failure was observed. A detailed description of the failure including symptoms, any error codes recorded, and the conditions under which the failure occurred. For claims above a defined value threshold, a workshop job card or repair order showing the installation and failure details may be required. For claims involving electrical components, a diagnostic report from an approved diagnostic tool may be required. Warranty claims must be submitted within sixty days of the failure being observed. Claims submitted after this period may not be accepted.

2.5 Scheduled Return Programs

2.5.1 Overview

The portal operates scheduled return programs that allow dealers to return eligible unsold stock in exchange for credit. There are two scheduled return programs: the quarterly return program and the yearly return program. These programs are available during defined return windows that are communicated to dealers in advance.

2.6 Eligibility for Returns

2.6.1 Overview

To be eligible for return under the scheduled return programs, parts must meet all of the following conditions. The parts must have been purchased within the eligible purchase period defined for the relevant return program. The parts must be in their original, undamaged packaging with all labels intact. The parts must not have been installed, used, or modified in any way. The parts must not fall into an excluded category. Excluded categories typically include electrical components, consumables, special order parts, and parts that have been specifically manufactured or sourced for a particular customer.

2.7 Return Value Limits

2.7.1 Overview

The maximum value of parts that can be returned under each program is calculated as a percentage of the dealer's net purchases during the relevant period. This percentage is defined in the dealer's commercial contract and may vary between dealers based on their tier and purchase volume. The portal calculates and displays the maximum returnable value when the dealer accesses the return submission screen.

2.8 Return Condition Requirements

2.8.1 Overview

All returned parts must be in a condition suitable for resale. Parts that are returned in damaged packaging, with missing labels, or showing signs of having been installed or used will be rejected upon inspection at the warehouse. Rejected parts will be returned to the dealer at the dealer's expense and no credit will be issued for them. It is the dealer's responsibility to ensure that all returned parts meet the condition requirements before shipping them.

2.9 Return Shipping

2.9.1 Overview

The dealer is responsible for arranging and paying for the return shipment. Parts must be securely packaged to prevent damage during transit. The return authorisation document generated by the portal must be included with the shipment. Parts received without a valid return authorisation will not be processed and will be returned to the sender. The dealer bears the risk of loss or damage during transit, so it is recommended to use a tracked and insured shipping service.

2.10 Credit Issuance

2.10.1 Overview

Credit for accepted returns is issued as a credit note applied to the dealer's account. The credit is calculated based on the net purchase price of the returned parts, not the list price. Credit notes are typically issued within a defined number of business days after the returned parts have been received and inspected at the warehouse. The dealer will receive a notification when the credit note has been issued.

2.11 Non-Scheduled Returns

2.11.1 Overview

Returns outside of the scheduled return windows are generally not accepted. Exceptions may be made in cases of supplier error, such as incorrect parts being shipped, or in cases of significant quality issues affecting a batch of parts. Non-scheduled return requests must be approved in advance by the account manager. Returning parts without prior approval will result in the shipment being refused at the warehouse.
